RF TEST REPORT

| Application No.: | SHEM1609006218CR | | |
|--|--|--|--|
| Applicant: | Murata Manufacturing Co., Ltd | | |
| FCC ID: | VPYCMABZ | | |
| IC: | 772C-CMABZ | | |
| Equipment Under Tes NOTE: The following sa | t (EUT): ample(s) was/were submitted and identified by the client as | | |
| Product Name: | LoRa module | | |
| Model No.(EUT): | CMWX1ZZABZ | | |
| Standards: | FCC PART 15 Subpart C: 2015 RSS-247 Issue 1 (May 2015) RSS-Gen Issue 4 (November 2014) | | |
| Date of Receipt: | 2016-09-21 | | |
| Date of Test: | 2016-09-28 to 2016-12-16 | | |
| Date of Issue: | 2017-01-16 | | |
| Test Result: | Pass* | | |

^{*}In the configuration tested, the EUT detailed in this report complied with the standards specified above.

E&E Section Manager SGS-CSTC (Shanghai) Co., Ltd.

The manufacturer should ensure that all products in series production are in conformity with the product sample detailed in this report. If the product in this report is used in any configuration other than that detailed in the report, the manufacturer must ensure the new system complies with all relevant standards.

The report must not be used by the client to claim product certification, approval, or endorsement by NVLAP, NIST, or any agency of the federal government. All test results in this report can be traceable to National or International Standards.

Report No.: SHEM160900621801

4 General Information

4.1 Client Information

| Applicant: | Murata Manufacturing Co., Ltd | |
|--------------------------|---|--|
| Address of Applicant: | 10-1, Higashikotari 1-chome, Nagaokakyo-shi Kyoto 617-8555 Japar | |
| Manufacturer: | Murata Manufacturing Co., Ltd | |
| Address of Manufacturer: | 10-1, Higashikotari 1-chome, Nagaokakyo-shi Kyoto 617-8555 Japan | |
| Factory: | Shenzhen Murata Technology Co., Ltd | |
| Address of Factory: | 15 Cuijing Road, Shenzhen Grand Industrial Zone, PingShan New District, Shenzhen, Guangdong, China 518118 | |

4.2 General Description of E.U.T.

| Product Description: | Module product with 902-928MHz Transceiver |
|----------------------|--|
| Brand Name: | Murata |
| Power Supply: | DC 3.3V |

4.3 Technical Specifications

| Operation Frequency: | 125KHz Channel: 902.3-914.9MHz 500kHz Channel: 903-914.2MHz |
|-----------------------|--|
| Modulation Technique: | LoRa |
| Spread Factor (SF): | 125KHz Channel: 7-10 500KHz Channel: 7-12 |
| Number of Channel: | 125KHz Channel: 64 channels 500KHz Channel: 8 channels |
| Channel Space: | 125KHz Channel: 200KHz 500kHz Channel: 1.6MHz |
| Antenna Type: | Monopole Antenna |
| Antenna Gain: | 1.04 dBi |

4.4 Test Mode

| Test Mode | Description of Test Mode |
|------------------|---|
| Engineering mode | Using test software was control EUT work in continuous transmitting mode or hopping mode. |

Report No.: SHEM160900621801

Page: 5 of 61

4.5 Test Channel

| | 125KHz Channel | | | 500KHz Channel | | |
|-----------------|----------------|-----------|----|----------------|-----------|----|
| | Channel | Frequency | SF | Channel | Frequency | SF |
| lowest channel | CH01 | 902.3MHz | 10 | CH65 | 903MHz | 12 |
| Middle channel | CH32 | 908.5MHz | 10 | CH68 | 907.8MHz | 12 |
| Highest channel | CH64 | 914.9MHz | 10 | CH72 | 914.2MHz | 12 |

Remark: Preliminary tests were performed in all tests in different data rata and antenna configurations at lowest channel, the data rates of worse case as above were chosen for final test.

4.6 Description of Support Units

The EUT has been tested with support equipments as below.

| Description | Manufacturer | Model No. | Supplied By |
|---------------------------|--------------|------------------------|-------------|
| Laptop | Lenovo | ThinkPad X 100e | SGS |
| DC Power Supply | GW | GPS-1850D | SGS |
| Serial port adapter plate | / | EVK for TypeABZ module | Client |

Parameter of DC Power Supply:

| | Manufacturer: | GW | |
|---------------|-----------------|----------------------|---------------|
| | Model No.: | GPS-1850D | |
| | Rated Input: | AC 100~240V, 50/60Hz | |
| Power Supply: | Rated Output: | DC 3.3V | |
| | Cable length: | AC port: | 3 wires 100cm |
| | Cable leffgtif. | DC port: | 2 wires 50 cm |

| Software name | Manufacturer | Software Vision | Supplied By |
|----------------------|--------------|-----------------|-------------|
| FSK-LoRa Module Test | 1 | 1.0.7 | Client |
| tool | / | | |

4.7 Test Location

All tests were performed at:

SGS-CSTC Standards Technical Services (Shanghai) Co., Ltd. 588 West Jindu Road, Xinqiao, Songjiang, 201612 Shanghai, China

Tel: +86 21 6191 5666 Fax: +86 21 6191 5678

Report No.: SHEM160900621801

Page: 6 of 61

4.8 Test Facility

The test facility is recognized, certified, or accredited by the following organizations:

CNAS (No. CNAS L0599)

CNAS has accredited SGS-CSTC Standards Technical Services (Shanghai) Co., Ltd. to ISO/IEC 17025:2005 General Requirements for the Competence of Testing and Calibration Laboratories (CNAS-CL01 Accreditation Criteria for the Competence of Testing and Calibration Laboratories) for the competence in the field of testing.

• FCC – Registration No.: 402683

SGS-CSTC Standards Technical Services (Shanghai) Co., Ltd. has been registered and fully described in a report filed with the Federal Communications Commission (FCC). The acceptance letter from the FCC is maintained in our files. Registration No.: 402683.

Industry Canada (IC) – IC Assigned Code: 8617A

The 3m Semi-anechoic chamber of SGS-CSTC Standards Technical Services (Shanghai) Co., Ltd. has been registered by Certification and Engineering Bureau of Industry Canada for radio equipment testing with Registration No.: 8617A-1.

VCCI (Member No.: 3061)

The 3m Semi-anechoic chamber and Shielded Room of SGS-CSTC Standards Technical Services (Shanghai) Co., Ltd. has been registered in accordance with the Regulations for Voluntary Control Measures with Registration No.: R-3868, C-4336, T-2221, G-830 respectively.

Report No.: SHEM160900621801

Page: 7 of 61

4.9 Measurement Uncertainty

| No. | Parameter | Measurement Uncertainty |
|-----|-------------------------------|--|
| 1 | Radio Frequency | < ±1 x 10 ⁻⁵ |
| 2 | Total RF power, conducted | < ±1.5 dB |
| 3 | RF power density, conducted | < ±3 dB |
| 4 | Spurious emissions, conducted | < ±3 dB |
| 5 | All emissions, radiated | < ±6 dB (Below 1GHz) < ±6 dB (Above 1GHz) |
| 6 | Temperature | < ±1°C |
| 7 | Humidity | < ±5 % |
| 8 | DC and low frequency voltages | < ±3 % |

Report No.: SHEM160900621801

Test Results 6

6.1 E.U.T. test conditions

Requirements:

15.31(e) For intentional radiators, measurements of the variation of the input power or the radiated signal level of the fundamental frequency component of the emission, as appropriate, shall be performed with the supply voltage varied between 85% and 115% of the nominal rated supply voltage. For battery operated equipment, the equipment tests shall be performed using a new batterv.

Operating **Environment:**

| Temperature: | 20.0 -25.0 °C |
|-----------------------|---------------|
| Humidity: | 35-75 % RH |
| Atmospheric Pressure: | 99.2 -102 kPa |

Test frequencies:

According to the 15.31(m) Measurements on intentional radiators or receivers, other than TV broadcast receivers, shall be performed and. if required. reported for each band in which the device can be operated with the device operating at the number of frequencies in each band specified in the following table:

| Frequency range over which | Number of | Location in the range of |
|----------------------------|-------------|---|
| device operates | frequencies | operation |
| 1 MHz or less | 1 | Middle |
| 1 to 10 MHz | 2 | 1 near top and 1 near bottom |
| More than 10 MHz | 3 | 1 near top. 1 near middle and 1 near bottom |

Pursuant to Part 15.31(c) For swept frequency equipment, measurements shall be made with the frequency sweep stopped at those frequencies chosen for the measurements to be reported.

EUT Configuration: The LoRa radio, as described in this report is separated into two sets of modes, which differ in their modulation bandwidths and operating channels. The 500kHz bandwidth channels form a traditional DTS modulation system. The 500kHz channels can have a spreading factor (SF) between 7 and 12, with a higher spreading factor corresponding to a lower data rate. Where data is taken in this report for 500KHz channel, unless state otherwise, the measurement were taken with a spreading factor of 12 as this constitutes the worst case scenario for emissions.

> The 125kHz channels form a hybrid DTS and frequency hopping system, which meets part 15.247's requirements for a hybrid system. 125KHz channels can have a spreading factor between 7 and 10, with 10 spreading the worst caseemission.

Data that is laid out in this report reflects the two different types of channels. For each test that has a requirement for either The DTS (500KHz) or Hybrid(125KHz) system, this data is separated as such. Their respective limits need to be applied to the data, and any test that is only required one system is only performed on that system. Where test data is shown, the spreading factor and voltage have automatically been chosen for worst case emission

Report No.: SHEM160900621801

Page: 10 of 61

6.2 Antenna Requirement

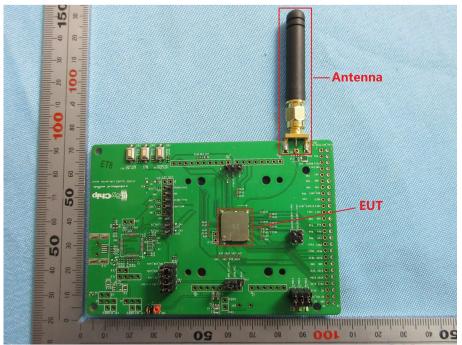

Standard requirement:

An intentional radiator shall be designed to ensure that no antenna other than that furnished by the responsible party shall be used with the device. The use of a permanently attached antenna or of an antenna that uses a unique coupling to the intentional radiator, the manufacturer may design the unit so that a broken antenna can be replaced by the user, but the use of a standard antenna jack or electrical connector is prohibited

The conducted output power limit specified in paragraph (b) of this section is based on the use of antennas with directional gains that do not exceed 6 dBi. Except as shown in paragraph (c) of this section, if transmitting antennas of directional gain greater than 6 dBi are used, the conducted output power from the intentional radiator shall be reduced below the stated values in paragraphs (b)(1), (b)(2), and (b)(3) of this section, as appropriate, by the amount in dB that the directional gain of the antenna exceeds 6 dBi.

EUT Antenna:

The antenna is Monopole Antenna. The gain of the antenna is less than 1.04 dBi.

Report No.: SHEM160900621801

Page: 11 of 61

6.3 Conducted Emissions on Mains Terminals

Frequency Range:

150 KHz to 30 MHz

Limit:

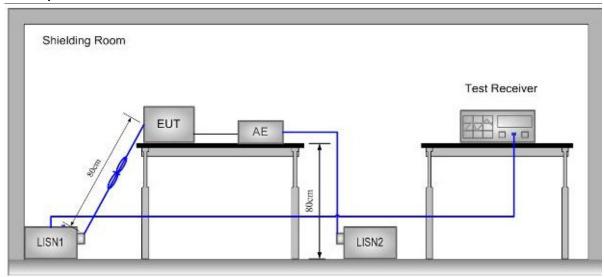

| Frequency range | Class B Limits: dB (µV) | | |
|-----------------|-------------------------|----------|--|
| MHz | Quasi-peak | Average | |
| 0.15 to 0.50 | 66 to 56 | 56 to 46 | |
| 0.50 to 5 | 56 | 46 | |
| 5 to 30 | 60 | 50 | |

Note1: The limit decreases linearly with the logarithm of the frequency in the

range 0.15 MHz to 0.50MHz.

Note2: The lower limit is applicable at the transition frequency.

Test Setup:

Ground Reference Plane

Test Procedure:

- 1) The mains terminal disturbance voltage was measured with the EUT in a shielded room.
- 2) The EUT was connected to AC power source through a LISN 1 (Line Impedance Stabilization Network) which provides $50\Omega/50\mu H + 5\Omega$ linear impedance. The power cables of all other units of the EUT were connected to a second LISN, which was bonded to the ground reference plane in the same way as the LISN for the unit being measured. A multiple socket outlet strip was used to connect multiple power cables to a single LISN provided the rating of the LISN was not exceeded
- 3) The tabletop EUT was placed upon a non-metallic table 0.8m above the ground reference plane. And for floor-standing arrangement, the EUT was placed on the horizontal ground reference plane, but separated from metallic contact with the ground reference plane by 0.1m of insulation.
- 4) The test was performed with a vertical ground reference plane. The rear of the EUT shall be 0.4 m from the vertical ground reference plane. The vertical ground reference plane was bonded to the horizontal ground reference plane. The LISN was placed 0.8 m from the boundary of the unit under test and bonded to a ground reference plane for LISN mounted on top of the ground reference plane. This distance was between the closest points of the LISN and the EUT. The mains lead of EUT excess 0.8m was folded back and forth parallel to the lead so as to form a horizontal bundle with a length between 0.3m and 0.4m. All other units of the EUT and associated equipment were at least 0.8 m from the LISN.

Report No.: SHEM160900621801

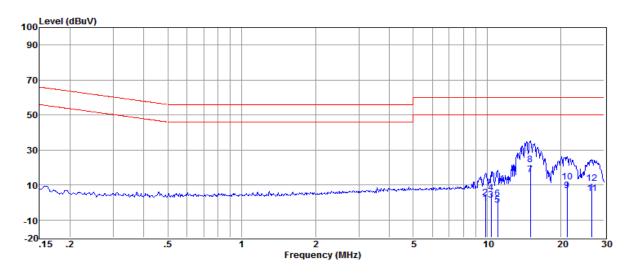

Page: 12 of 61

Remark: Pre-scan was performed with peak detected on all ports, Quasi-peak & average measurements were performed at the frequencies at which maximum peak emission level were detected. Pretest under all modes; choose the worst case mode (500KHz channel in 907.8MHz) record on the report. Please see the attached Quasi-peak and Average test results.

Test Result: Pass

6.4 6dB Occupied Bandwidth

Test Configuration:

Connected cable Spectrum Analyzer

Test Procedure:

- 1) Place the EUT on the table and set it in transmitting mode.
- 2) Remove the antenna from the EUT and then connect a low loss RF cable from the antenna port to the spectrum analyzer.
- 3) Set the spectrum analyzer as RBW=100KHz, VBW≥3 x RBW, Detector=Peak, Trace mode= Max hold, Sweep=Auto couple.
- 4) Mark the peak frequency and -6dB (upper and lower) frequency.
- 5) Repeat above procedures until all frequency measured was complete.

Limit: ≥ 500 kHz

Test Result: Pass

Test Data:

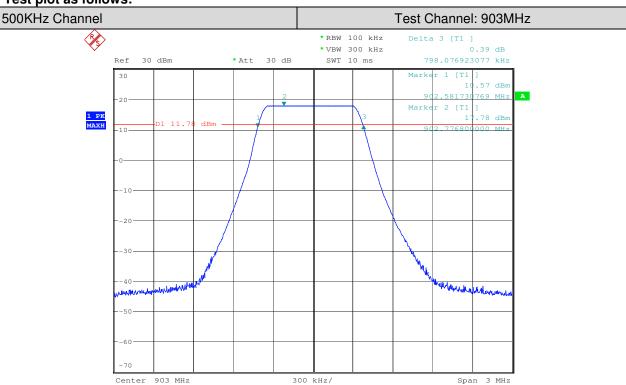

| Test Mode | Test Frequency (MHz) | 6dB Bandwidth (KHz) | Limit (KHz) | Result |
|----------------|-------------------------|------------------------|-------------|--------|
| 500kHz Channel | 903 | 798.08 | | Pass |

6.5 20dB Occupied Bandwidth

Test Configuration:

Test Procedure:

Sweep = Auto; Detector = Peak. Trace = Max Hold.

- 1. Remove the antenna from the EUT and then connect a low RF cable from the antenna port to the spectrum;
- 2. Set the spectrum analyzer: Span = approximately 1.5 to 5 times the OBW, centred on the hopping channel:
- centred on the hopping channel;
 3. Set the spectrum analyzer: RBW ≥ 1% to 5% of the OBW. VBW ≥ 3 x RBW.
- 4. Mark the peak frequency and -20dB points.

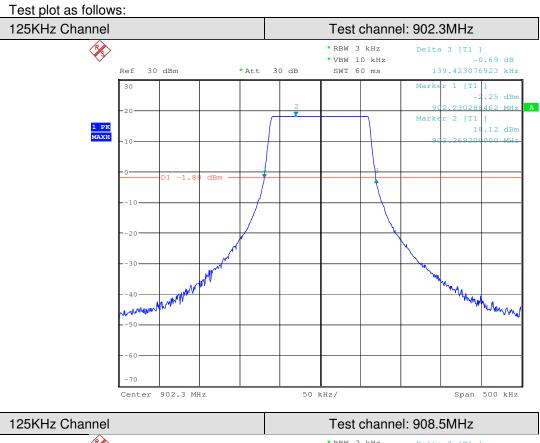

Test Date:

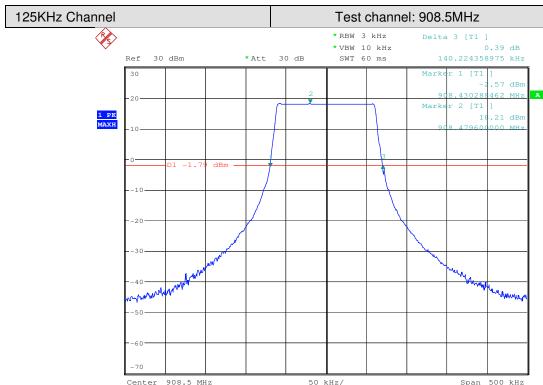

| Test Mode | Test Frequency(MHz) | Bandwidth(KHz) |

6.6 Maximum Conducted (Average) Output Power

Test Configuration:

EUT

(Antenna Port

Connected cable Spectrum Analyzer

Test Procedure:

- 1) Place the EUT on the table and set it in transmitting mode.
- 2) Remove the antenna from the EUT and then connect a low loss RF cable from the antenna port to the spectrum.
- 3) Set span to at least 1.5 times the OBW
- 4) Set RBW = 1% to 5% of the OBW, not to exceed 1 MHz
- 5) Set VBW ≥ (3 × RBW)
- 6) Set number of points in sweep =30000
- 7) Set Detector = RMS, Sweep time = auto
- 8) Trace average at least 100 traces in power averaging (rms) mode
- 9) Use the instrument's band/channel power measurement function with the band limits set equal to the OBW bandwidth edges
- 10) Record the Max. power channel reading value.
- 11) Repeat above procedures until all the frequency measured were complete.

Test Limit: 30dBm
Test Result: Pass

Test Data:

| Test mode | Test Channel(MHz) | Reading Power (dBm) | Output Power (dBm) | Limit (dBm) | Result |
|----------------|----------------------|------------------------|--------------------|-------------|--------|
| | 902.3 | 18.23 | 18.73 | | Pass |

6.7 Power Spectral Density

Test Configuration:

EUT cable Spectrum
(Antenna Port Analyzer

Test Procedure:

- 1) Remove the antenna from the EUT and then connect a low RF cable from the antenna port to the spectrum.
- 2) Set the spectrum analyzer: Center Frequency= Channel Frequency, RBW= 3 kHz, VBW = 10 kHz. Span= 1.5 times the OBW bandwidth, Sweep = auto; Detector = RMS
- 3) Set number of points in sweep =30000
- 4) Employ trace averaging (rms) mode over a minimum of 100 traces
- 5) Use the peak marker function to determine the maximum amplitude level within the RBW.
- 6) Record the marker level for the particular mode.
- 7) Repeat these steps for other channel and modes.

Test Limit: DTS: 8dBm/3kHz

Hybrid System: 8dBm/3kHz

Test Result: Pass

Test Data:

| Test mode | Test Channel(MHz) | Reading Value (dBm/3KHz) | PSD (dBm/3KHz) | Limit (dBm/3KHz) | Result |

6.8 Carrier Frequencies Separated

Test Configuration:

Test Procedure:

- 1) Remove the antenna from the EUT and then connect a low RF cable from the antenna port to the spectrum.
- 2) Set the spectrum analyzer: RBW ≥ 1% of the span. VBW ≥ 3 x RBW, Span = 500KHz. Sweep = auto; Detector Function = Peak. Trace = Maxhold.
- 3) Allow the trace to stabilize. Use the marker-delta function to determine the separation between the peaks of the adjacent channels. The limit is specified in one of the subparagraphs of this Section. Submit this plot.

Limit:

0.025MHz or the 20dB bandwidth (whichever is greater)

Test data:

| Test Mode | Test Channel Carrier Frequencies Separated (KHz) | | Limit (KHz) | Test Result |
|-------------------|--|--------|----------------|----------------|
| 125KHz Channel | Middle Channels (Channel 31 & 32) | 200.49 | 140.72 | Pass |

6.10 Average Time of Occupancy

Test Configuration:

EUT cable Spectrum
(Antenna Port Analyzer

Test Procedure:

- Remove the antenna from the EUT and then connect a low RF cable from the antenna port to the spectrum. Keep EUT in Hopping transmitting with all kind of modulation.
- 2) Set spectrum analyzer span = 0. centered on a hopping channel;
- Use Emission width * No. of Hopping Channels in 25.6s to determine the total time occupancy

Limit:

Regulation 15.247(f), For the purposes of this section, hybrid systems are those that employ a combination of both frequency hopping and digital modulation techniques. The frequency hopping operation of the hybrid system, with the direct sequence or digital modulation operation turned-off, shall have an average time of occupancy on any frequency not to exceed 0.4 seconds within a time period in seconds equal to the number of hopping frequencies employed multiplied by 0.4.

Test Data:

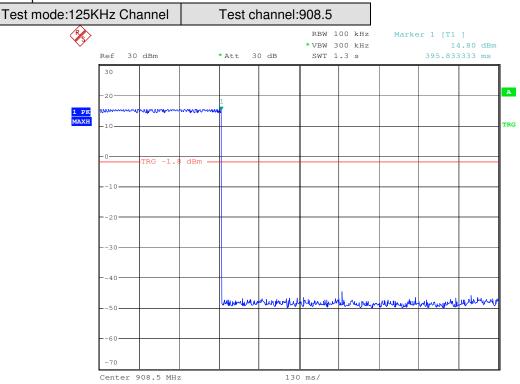

| Test Mode | Test Frequency | Emission Width (ms) | Number of Hopping Channel in 25.6s | Average Occupancy Time (s) | Limit (s) | Test Result |
|-------------------|-------------------|---------------------------|---------------------------------------|----------------------------------|--------------|-------------|

Page: 44 of 61

Test Configuration:

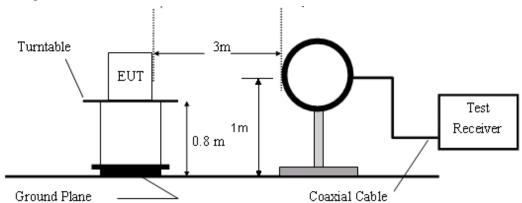

Figure 1. Below 30MHz radiated emissions test configuration

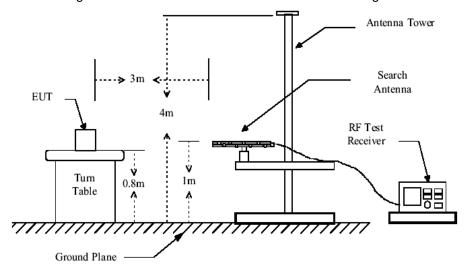

Figure 2. 30MHz to 1GHz radiated emissions test configuration

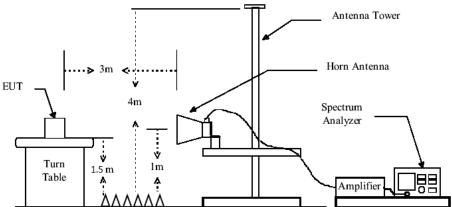

Figure 3. Above 1GHz radiated emissions test configuration

Report No.: SHEM160900621801

Page: 45 of 61

- Test Procedure: 1) The procedure used was ANSI Standard C63.10. The receiver was scanned from 9 KHz to 25GHz.When an emission was found, the table was rotated to produce the maximum signal strength. An initial pre-scan was performed for in peak detection mode using the receiver. The EUT was measured for both the Horizontal and Vertical polarities and performed a pre-test three orthogonal planes. For intentional radiators, measurements of the variation of the input power or the radiated signal level of the fundamental frequency component of the emission, as appropriate, shall be performed with the supply voltage varied between 85% and 115% of the nominal rated supply voltage. The worst case emissions were reported.
 - 2) Low noise amplifier was used below 1GHz, High pass Filter was used above 3GHz. We did not use any amplifier or filter between 1G and 3GHz.
 - 3) Test were performed for their spatial orthogonal(X, Y, Z), the worst test data (X orthogonal) was submitted.
 - a) For this intentional radiator operates below 25 GHz, the spectrum shall be investigated to the tenth harmonic of the highest fundamental frequency. And above the third harmonic of this intentional radiator, the disturbance is very low. So the test result only displays to 5rd harmonic.
 - b) As shown in Section, for frequencies above 1000MHz. the above field strength limits are based on average limits. However, the peak field strength of any emission shall not exceed the maximum permitted average limits specified above by more than 20 dB under any condition of modulation.
 - 4) Pretest under all modes below 1GHz; choose the worst case mode (802.11b) record on the report.
 - 5) No spurious emissions were detected within 20dB of limit below 30MHz.

Test Result: Pass

6.13 99% Occupied Bandwidth

Test Configuration:

Test Procedure:

- 1) Remove the antenna from the EUT and then connect a low RF cable from the antenna port to the spectrum;
- 2) Set the spectrum analyzer: Span = approximately 1.5 to 5 times the OBW, centred on the test channel;
- 3) Set the spectrum analyzer: RBW = 1% to 5% of the OBW. VBW ≥ 3 x RBW. Sweep = auto; Detector Function = Peak. Trace = Max Hold.
- 4) Mark the peak frequency and 99% bandwidth points.

Test Date:

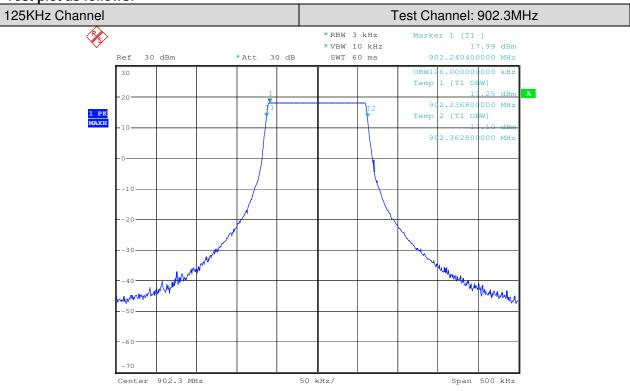

| Test Mode | Channel (MHz) | Bandwidth (KHz) |
|-----------|---------------|-----------------|
| | 902.3 | 126.00 |
| 125KHz | 908.5 | 126.00 |
| | 914.9 | 125.60 |
| | 903 | 682.69 |
| 500KHz | 907.8 | 682.69 |
| | 914.2 | 677.88 |
